Satellite Mapping for Technical Cooperation Projects

**UNOSAT Satellite Imagery Tools and Services:**
*Presentation for ILO officers*

Friday March 19th, 14h30 – 15h30
Room 11- R2

ILO officials are cordially invited to attend the presentation by UNOSAT on accurate satellite mapping and image processing suiting the needs of technical interventions at field level.

UNOSAT will present satellite imagery resources for physical mapping, as well as image processing services for analytical mapping of specific technical needs in field operations. Examples of detailed physical/analytical maps in several crisis-affected countries and regions will be provided, such as: Bam (Iran), Afghanistan, Goma (DRC), Algeria and Morocco earthquake-affected zones.

Such resources are relevant for project design in technical cooperation programs relating to employment generation, labour market assessments, human settlements analysis, post-crisis infrastructure reconstruction/rehabilitation, local economic development, etc.

We believe you will find this presentation particularly interesting for your work. *For any further information, please contact Donato Kinger-Passigli (kiniger@ilo.org, tel: 6834) or Luca Fedi (fedi@ilo.org, tel.: 7831).*
